*For more information on the Standard Occupational Classification (SOC) system, go to: www.bls.gov/soc/socguide.htm

For Occupational Dictionary, see:

http://www.workforce.az.gov/admin/uploadedPublications/1194_OccDictByCode.pdf

Some occupations suppressed due to confidentiality or base employment of 50 or less, or due to insufficient data.

Occupations that are projected to increase by less than 10 opening over the 10 year period will have an annual average growth less than 1. For example, the annual average for an occupation projected to have 5 openings over the ten year period will have an annual average of 0.5. Since "fractional" openings are not calculated in these projections, this means the occupation is projected to have an average of one opening every two years.

Occupations in decline or with no growth will show annual openings due to growth as 0.

Total annual openings are the sum of openings from growth plus openings from separations. Separations are vacancies caused by workers leaving the labor market or changing occupations. Thus an occupation that is not growing or is in decline could still have openings due to separations.

Headings in **bold** font are the major occupational groups of the Standard Occupational Classification (SOC) system.

Major occupational groups of the SOC are a composite of all individual occupations listed below the major group heading.

2004-2014 Arizona Statewide Occupational Projections

| Standard Occupation Classification (SOC)* | | Employment | | 10 Year Change | | Average Annual Openings | | |
|---|-----------|-------------------|-------------------|----------------|---------|-------------------------|-----------------------|-------|
| SOC Code | SOC Title | 2004 Estimated | 2014 Projected | Number | Percent | Due to Growth | Due to Separations | Total |

Occupation codes ending in 000 (e.g. 11-1000, 11-2000, 11-3000, etc) are a summation of all the occupations listed below them.

Totals may not add exactly due to rounding or suppression of data.

See Notes worksheet for additional information on methodology.

For more information on occupational projections, visit: <http://stats.bls.gov/emp/optd/home.htm>

Prepared by Arizona Dept of Economic Security, Research Administration in cooperation with the U.S. Dept of Labor, Bureau of Labor Statistics, December 2006.

Methodology

Before using the data in this report, readers should understand this methodology and note its limitations. **The projections presented should be viewed as indicators of relative magnitude and probable direction rather than as forecasts of absolute occupational demand.**

Furthermore, the occupational forecasts are only measures of expected employment and demand for labor and indicate little about future labor supply. It is therefore recommended that these data be used with other sources of occupational information.

The total occupational employment of the forecast will be greater than the total nonfarm employment estimated by the Current Employment Statistics (CES) program and Occupational Employment Survey (OES) program for the following reasons. First, self employed, unpaid family workers, and agriculture workers are included in the projections, but not in CES and OES. Next, some industries are not included in the OES data because of low survey response rate and a base employment level that is too small to make any statistically significant estimates.

Employment projections provided in this publication were developed in cooperation with and using techniques based on those developed by the U.S Department of Labor's Bureau of Labor Statistics. This methodology is comprised of five basic steps:

- 1) Industry employment data is compiled from CES and unemployment insurance tax records.
- 2) A fraction of the industry employment is assumed to be self employed or unpaid family workers. The fraction is determined from national surveys and is added to the state's industry employment data.
- 3) Staffing patterns from state and national data are used to divide each industry's total employment into the different occupations for that industry.
- 4) Each industry's total employment is calculated during the forecast period according to the industry projections for the same time period that were produced by DES Research Administration.
- 5) Total employment in any occupation is not only calculated by changes in the total industry employment, but also by changes in share of that occupation's employment in each industry. The change in the share of total industry employment of any occupation is known as the occupational change factor. When the occupational change factor is determined for each occupation in every industry, the occupational forecasts are finished.

To avoid the possible disclosure of confidential employer information, employment data have been suppressed if: less than three firms reported a single occupation; one firm reported more than 50 percent of the occupational estimate; or two firms combined reported more than 75 percent of the occupational estimate. In certain cases, releases may have been obtained from large employers to waive the confidentiality criteria.
